<p>Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.</p>

13 different SMA beam modeling papers

Traditional 4-pt bending

- Large rotations lead to undesirable axial and shear loads

3 Pure Bending Experimental Studies:

- Berg (1995)
 - Moment controlled, instead of rotation controlled
- Bundara et. al. (2000)
 - Moment controlled, instead of rotation controlled
 - Did not fully transform outer fiber of beam
 - Curvature measured from grips
- Rejzner, J., Lexcellent, C., Raniecki, B., (2002)
 - Did not fully transform outer fiber of beam
 - Curvature measured from grips

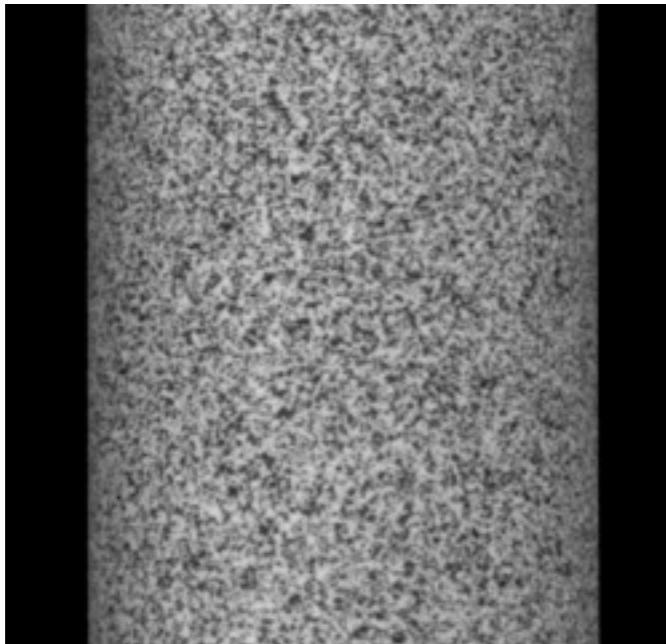

No one has characterized the same SMA in tension,
compression, and pure bending

Strain is known to localize in tension. It is not known how this
affects the bending behavior

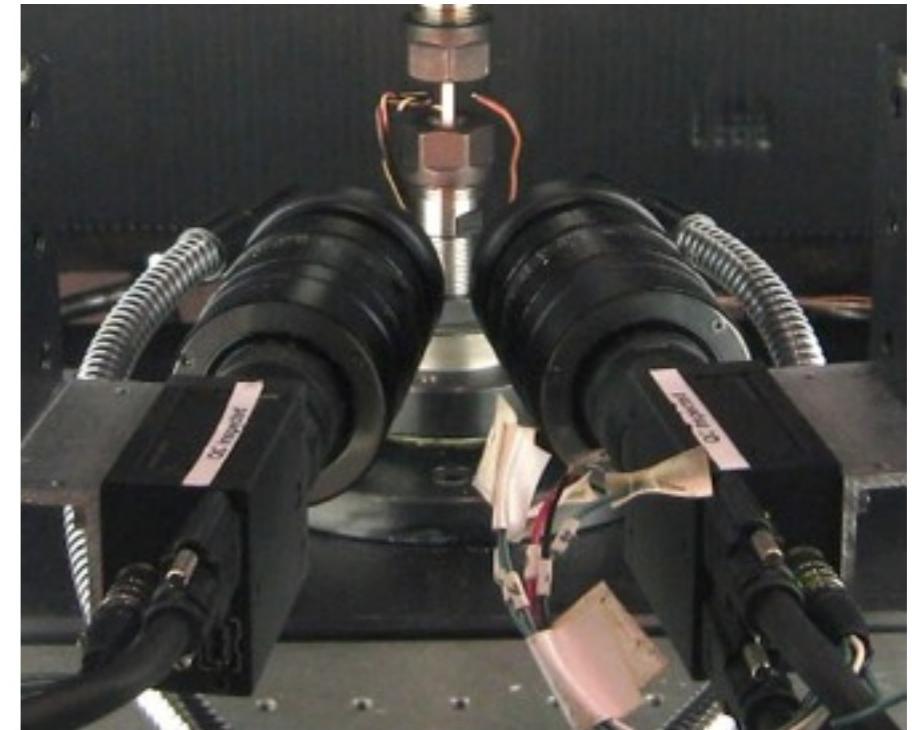

Digital Image Correlation (DIC)

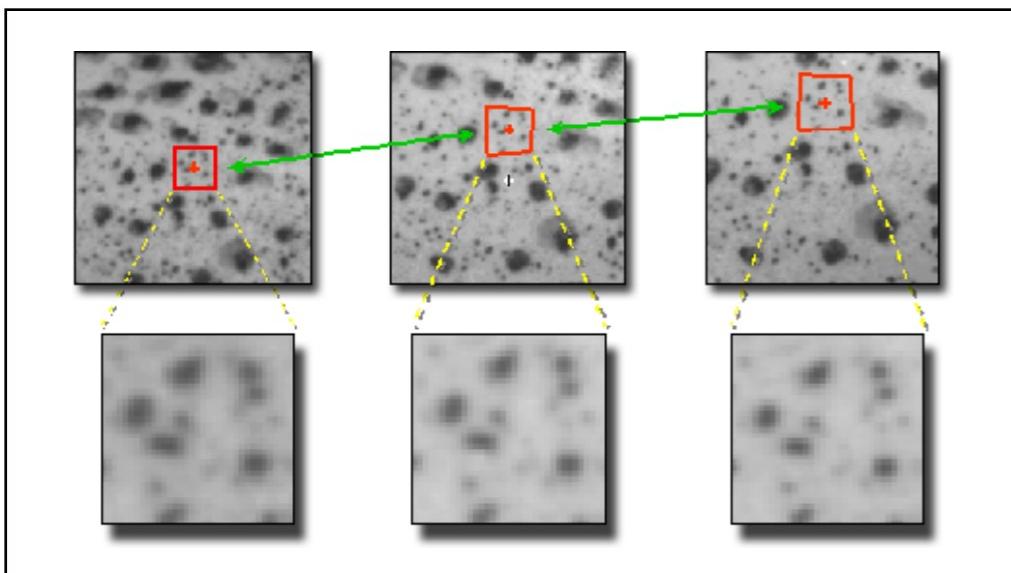

APPLY SPECKLES

CAPTURE DIGITAL IMAGES

TRACK SPECKLES

CALCULATE BIOT STRAIN

$$F = \frac{\partial x}{\partial X} = QU$$

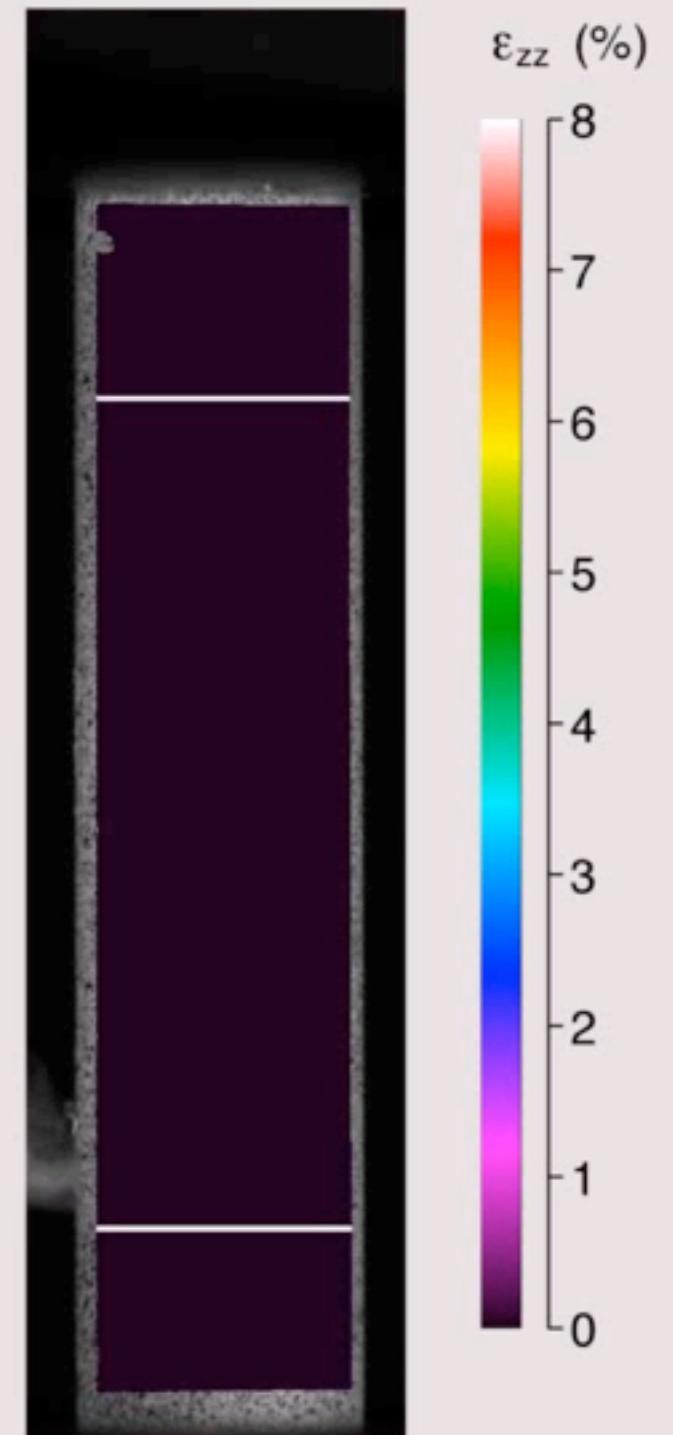

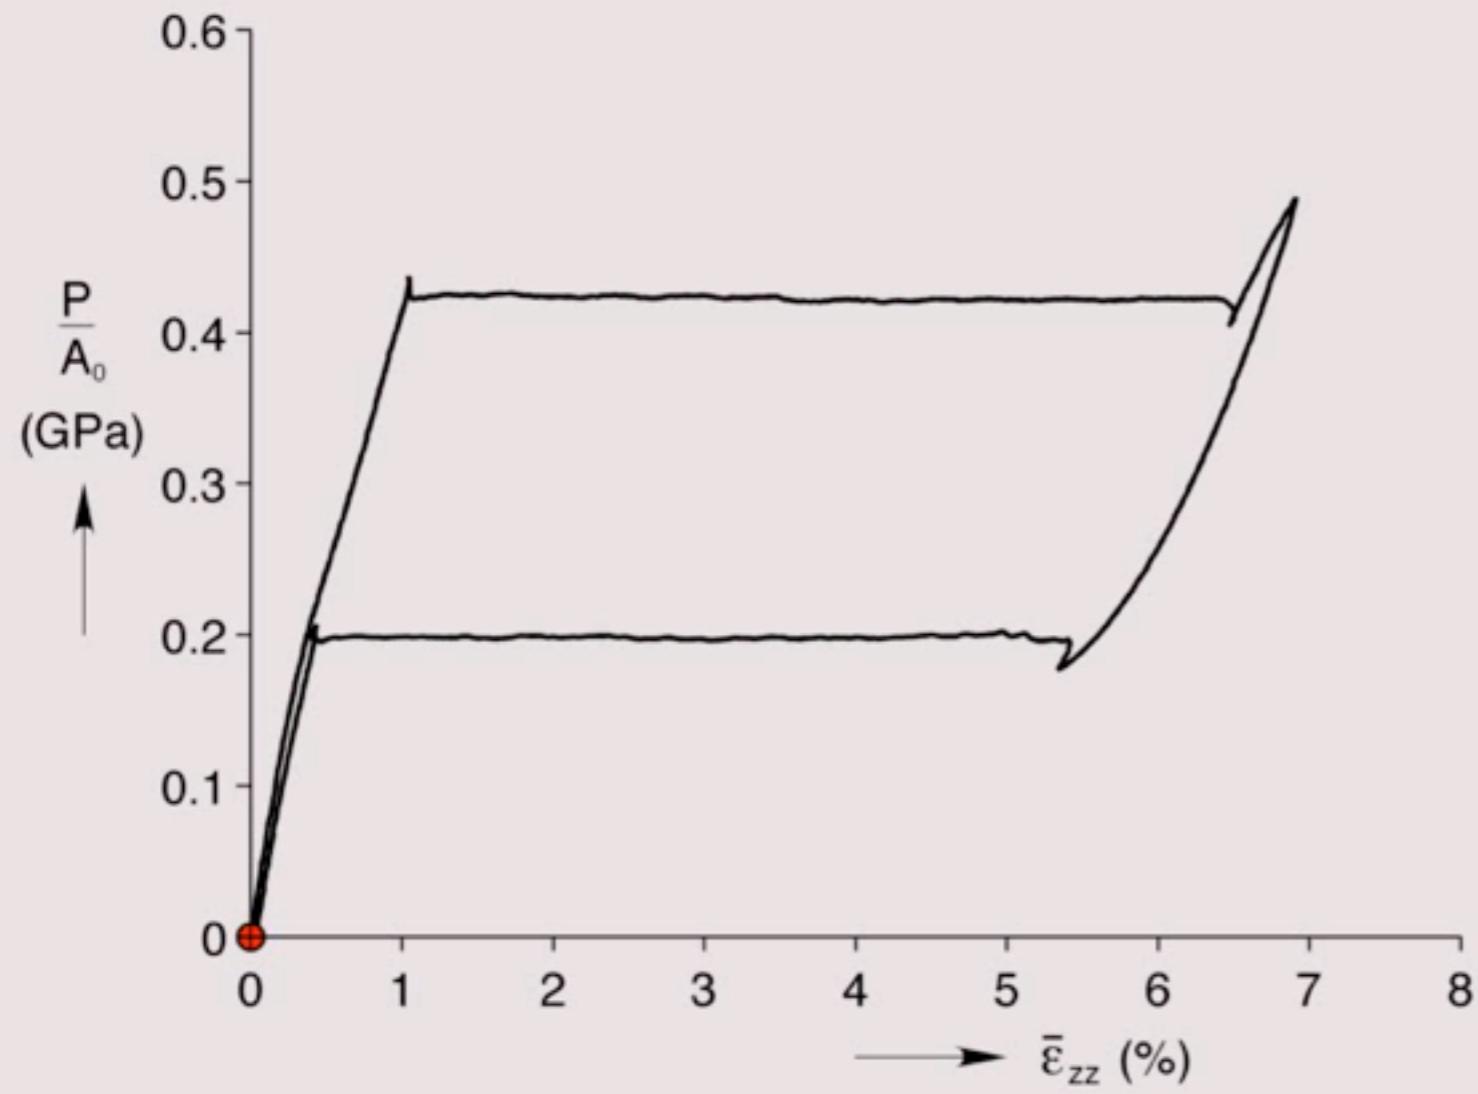

$$\epsilon = U - I$$

Beam Theory vs. Average Strain Profiles

Beam Theory vs. Global Response

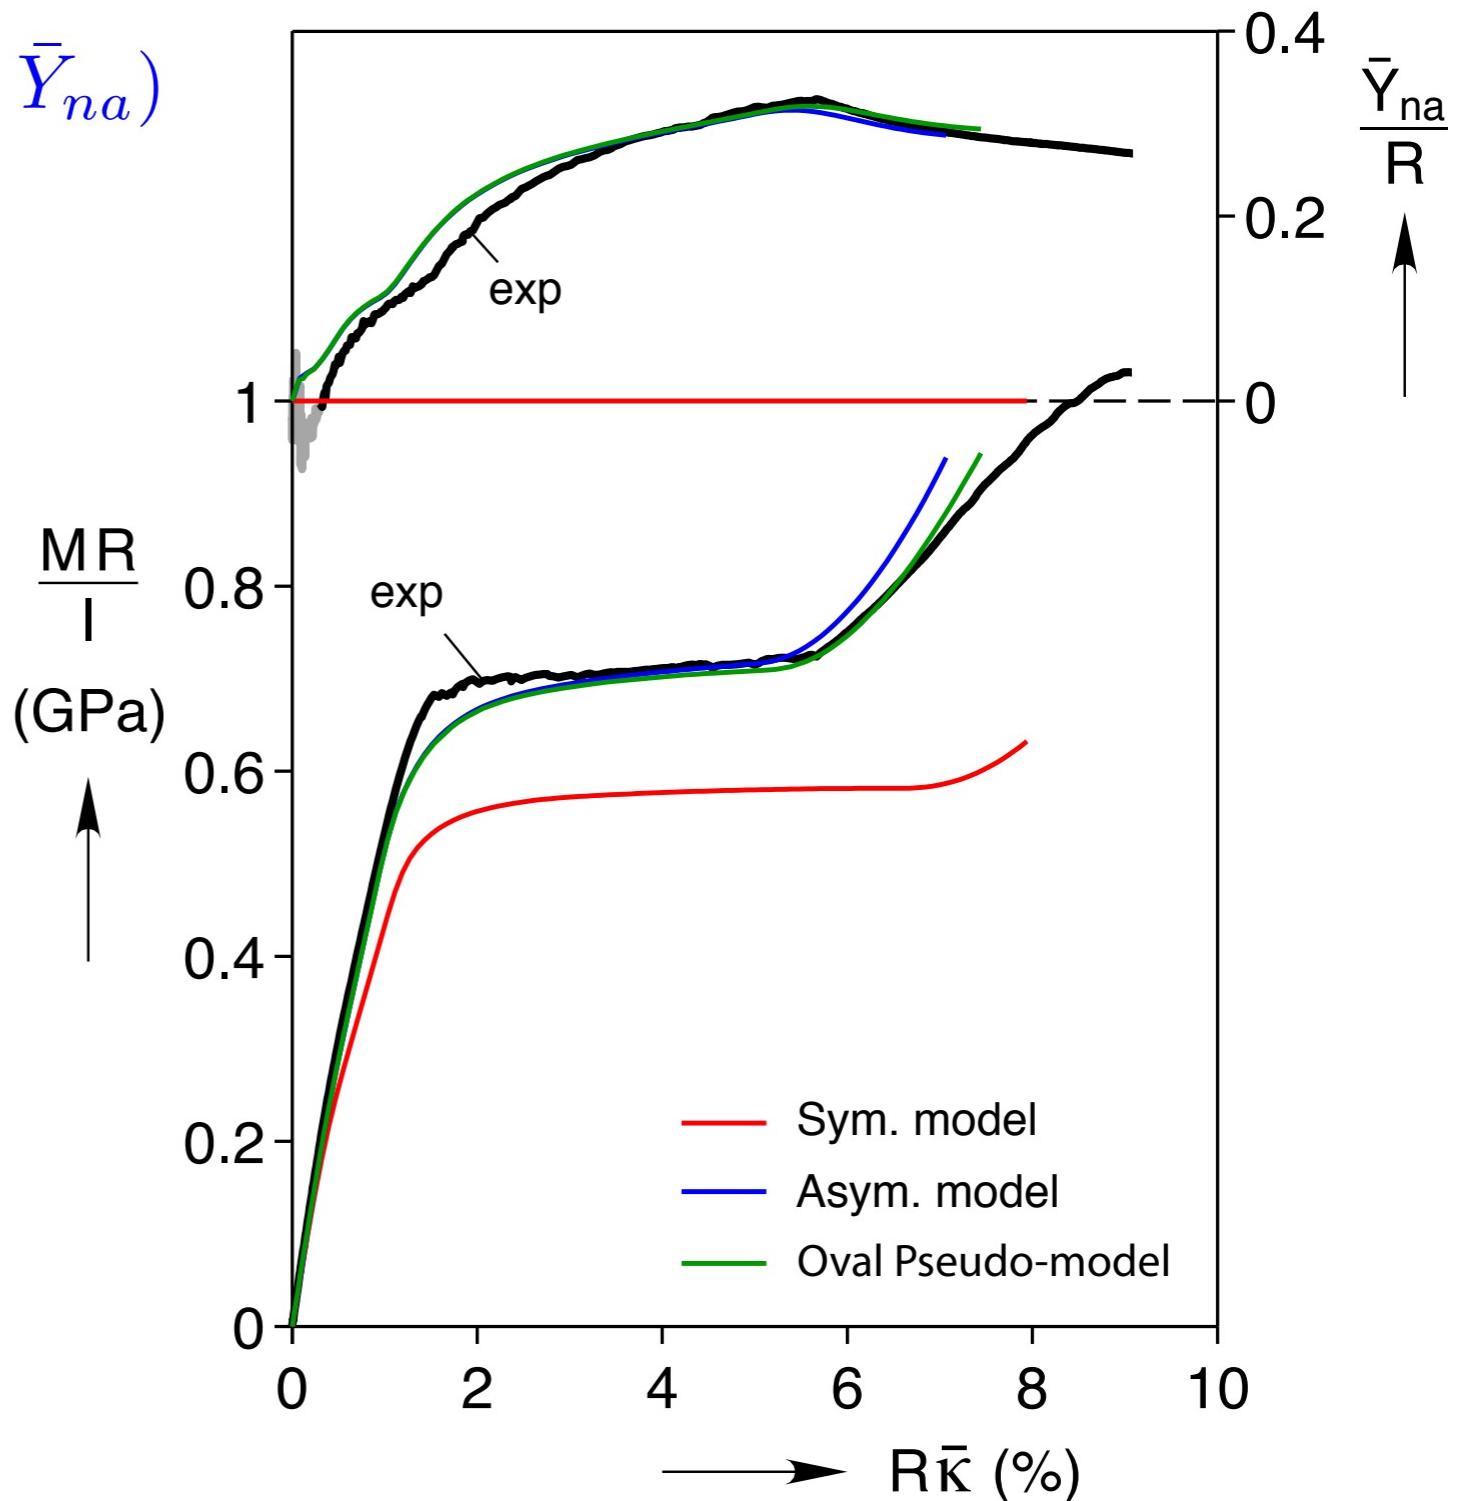

$$\varepsilon_{zz} = -\bar{\kappa}(Y - \bar{Y}_{na})$$

Locate Neutral Axis

$$P_Z = 0 = \int_{A_o} \sigma_{ZZ} \, dA$$

Calculate Moment

$$M = - \int_{A_o} Y \sigma_{ZZ} \, dA$$
